December 29, 2021 Percent means for every \$100\$. So, when percent is calculated for any value, it means that we calculate the value for every \$100\$ of the reference value. Percent is denoted by the symbol %.

Convert Percent to Fraction  $x\% = \frac{x}{100}$  Example:  $25\% = \frac{25}{100} = \frac{1}{4}$

Convert Fraction to Percent  $\frac{x}{y} = \left(\frac{x}{y} \times 100\right)\%$  Example:  $\frac{1}{4} = \left(\frac{1}{4} \times 100\right)\% = 25\%$

Values to Memorize for Quick Calculations

$1 = 100\%$	$\frac{1}{6} = 16\frac{2}{3}\%$	$\frac{1}{3} = 33\frac{1}{3}\%$	$\frac{1}{2} = 50\%$	$\frac{2}{3} = 66\frac{2}{3}\%$	$\frac{3}{4} = 75\%$	$\frac{4}{5} = 80\%$	$\frac{1}{10} = 10\%$	$\frac{1}{5} = 20\%$	$\frac{1}{4} = 25\%$	$\frac{1}{3} = 33\frac{1}{3}\%$	$\frac{1}{2} = 50\%$	$\frac{2}{3} = 66\frac{2}{3}\%$	$\frac{3}{4} = 75\%$	$\frac{4}{5} = 80\%$
-------------	---------------------------------	---------------------------------	----------------------	---------------------------------	----------------------	----------------------	-----------------------	----------------------	----------------------	---------------------------------	----------------------	---------------------------------	----------------------	----------------------

New Number When a Number is Increased/Decreased by a Certain Percent

If  $x\%$  is increased by  $y\%$ , then new number  $= x + \frac{xy}{100}$

If  $x\%$  is decreased by  $y\%$ , then new number  $= x - \frac{xy}{100}$

Examples: If \$150\$ is increased by  $10\%$ , new number  $= 150 + \frac{150 \times 10}{100} = 165$

If \$150\$ is decreased by  $10\%$ , new number  $= 150 - \frac{150 \times 10}{100} = 135$

Reduction in Consumption so as Not to Increase the Expenditure

If the price of a commodity increases by  $x\%$ , the reduction in consumption so as not to increase the expenditure  $= \frac{x}{100 + x} \times 100$

If the price of a commodity decreases by  $x\%$ , the increase in consumption so as not to decrease the expenditure  $= \frac{x}{100 - x} \times 100$

Population

If population of a town is  $P$  and it increases at the rate of  $r\%$  per annum, then population after  $n$  years  $= P \left(1 + \frac{r}{100}\right)^n$

If population of a town is  $P$  and it decreases at the rate of  $r\%$  per annum, then population after  $n$  years  $= P \left(1 - \frac{r}{100}\right)^n$

Value of an Object

If the present value of an object is  $P$  and it depreciates at the rate of  $r\%$  per annum, then value of the object after  $n$  years  $= P \left(1 - \frac{r}{100}\right)^n$

If the present value of an object is  $P$  and it appreciates at the rate of  $r\%$  per annum, then value of the object after  $n$  years  $= P \left(1 + \frac{r}{100}\right)^n$

Required percentage =  $\frac{82 - 62}{62} \times 100 = 32.26\%$
